Jun 3, 2019 The map is at "Move to the center and press (A)." $\zeta(s) = 1 + \sum_{n=1}^{\infty} \frac{1}{n^s}$ This function is entire of rapid growth with respect to the usual growth if s is in the half-plane $\text{Re } s > 0$, and in that case, it has an analytic continuation to all of the complex plane except for a discrete set of points. If $s \in \mathbb{R}$, $s > 1$, then $\zeta(s) = \frac{1}{s-1} + \mathcal{O}(s^{-2})$. For $s \in \mathbb{R}$, we have the asymptotic expansion $\zeta(s) = \frac{1}{s-1} + \mathcal{O}(s^{-2})$, from which it is not hard to see that $\zeta(2) = \frac{\pi^2}{6}$ and $\zeta(3) = \frac{\pi^3}{32}$. [1] This work is supported by Discovery Grant RGPIN-2017-04554 from Natural Sciences and Engineering Research Council of Canada (NSERC) Shahid Khan's Son Joins Durgatar Athletics Club Durgatar's Shaz Maher has played and coached for England and represented her country at the Commonwealth Games and Olympics. Shaz Maher: His coach and friend Mark Shaw, Jonny Edwards and Martin Howell from the Durgatar Athletics Club: Durgatar's Shaz Maher and his father, Shahid Khan, play rugby union for the Durgatar Club and there was plenty of family support on the day. Shaz Maher got his opportunity to play in the Division two rugby game, which is the equivalent of U-15s, when we had an injury to a player. I would say Shaz has been around [for a while] but he will have been developing as he has been fit and developed in training. He's turned out for several training sessions and hopefully he'll play this match, too. It's a great team, they put in some pressure and they
